How to Consume Philippine Geoportal Layers in ArcGis

1. In the Catalog window (ArcMap) or Catalog Tree (ArcCatalog), expand the GIS Servers node and double-click Add WMS Server.

![Catalog Tree Image]

2. In the following screen enter the url:
   http://geoserver.namria.gov.ph/geoserver/ows?service=wms&version=1.1.1&request=GetCapabilities, and then click Get Layers. The list of available layers will be displayed. Click Ok to add the PGP web map service.

![Add WMS Server Image]
3. Click the GIS Server connection to expand it. You'll see a series of GIS services in the tree view. Expand the Geoserver web map service on geoserver.namria.gov.ph folder.

4. Drag and drop the layer to view of ArcMap.
